

## ABSTRACT

A switching terminal (1) applied to a detecting equipment includes a carrier strip (10), a movable terminal (13) and a stationary terminal (12) respectively extending from a common edge of the carrier strip; Each of the movable terminal and the stationary terminal has a retaining portion (122, 132), a base section (121, 131) and a contact section (123, 133) connecting to the base, The base section 132 of movable terminal defines a cutout (1324) on an edge thereof adjacent to the stationary terminal.
